

Diaphragm type chemical seal with union nut

according to DIN 11851

Features

Quick coupling
Various process connections
Flush diaphragm at the front
Foodstuff compatible filling liquids

Description

Chemical seals are used when media falsify the pressure measurements due to high temperature ,high viscosity or their propens
Chemical seals transmit the process pressure to the measuring instrument , with the diaphragm forming a hermetic seal between the medium and measuring instrument.
The liquid used to transmit the process pressure to the measuring instrument is foodstuff compatible.

Applications

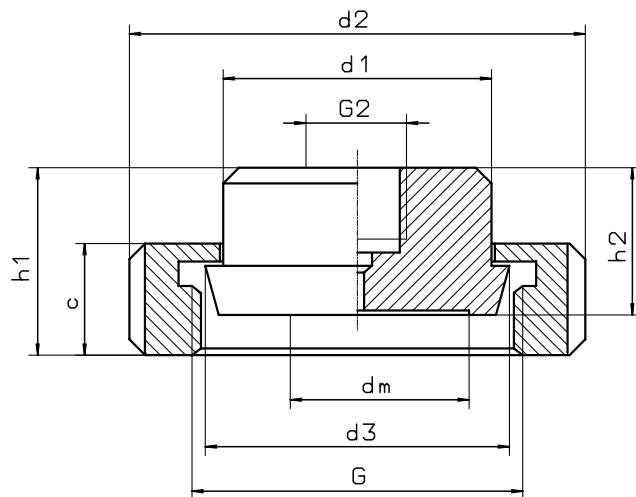

Pharmaceutical industries
Foodstuff industries
Process engineering
